The Future of Health Care

SURF'S UP SOUP'S

Jill Jansen, RN, MN Sharing and caring. **Primary Care Nurse**

Local CONTEXT for Maori

- ASH rates EBOP increased by 42% compared to WBBOP 26%
- Maori make up 43% of Type 2 diabetes patients.
- 2012 24% of Maori Type 2 diabetes were SMOKERS.
- BOP Smoking rates for Maori double non-Maori
- Deprivation levels raised to 54%
- Approx 370 Maori missing from projected Type 2 prevalence.
- Unmet Health Need for Maori women 10% all 4%.
- IHD for BOP Maori twice the rest of NZ

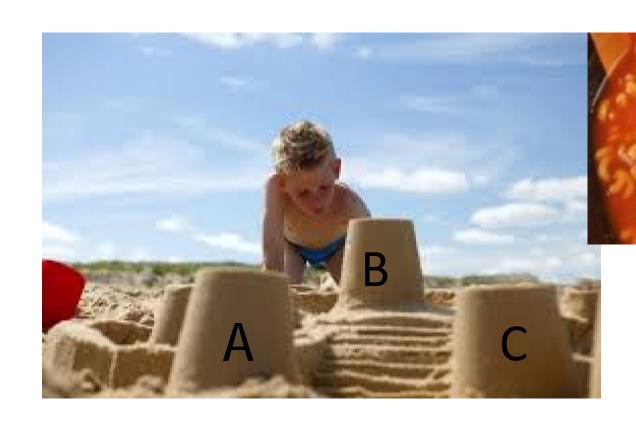

EBPHO Health Needs Assessment. 2012 PHOcus

What is Alphabet Soup? ABC of chronic disease self-management

A = Attitude

3 = 3ehaviour

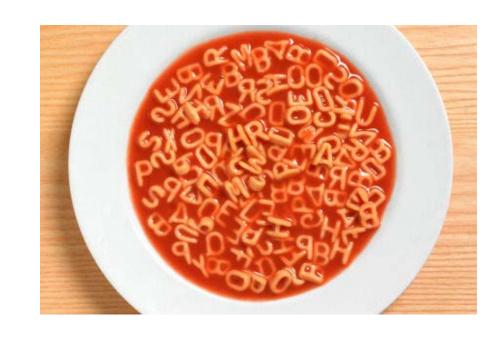

C= Care Plan

ABC + DEFGHIJ + add any other ingredients

- D diagnosis, duration;
- E: education, exercise;
- F: family, food;
- G: glucose testing;
- H: HbA1c; hypos
- I: insulin, income;
- J: jam:

Why don't we get it right?

Because we don't use local

ingredients.

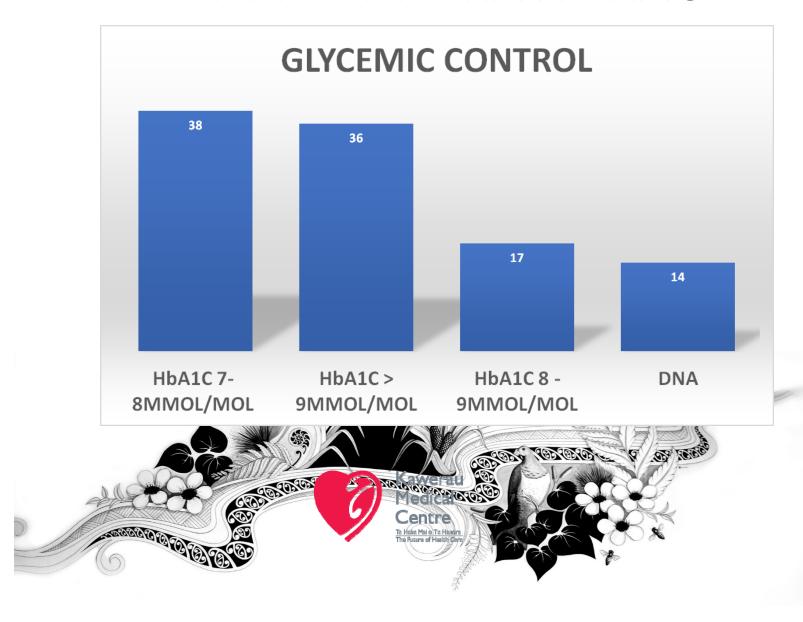

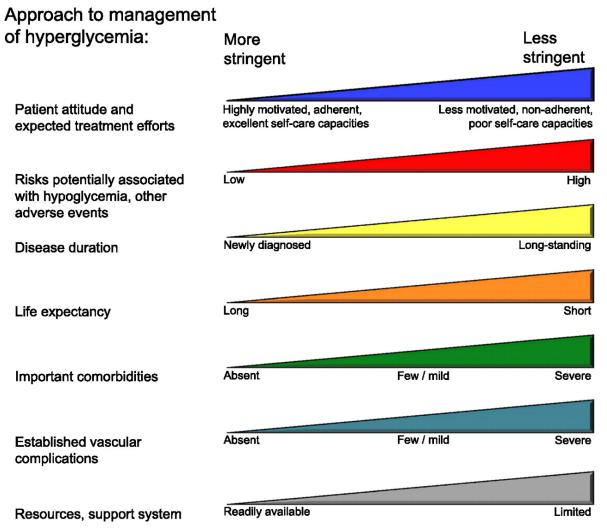

REALITY IN KAWERAU

Depiction of the elements of decision making used to determine appropriate efforts to achieve glycemic targets.

"No decision about me without me"

Coulter & Collins, 2011

Why did we create this? Because we could!

- Healthy clinic culture. Clinic model uses a NZ model of care.
- Workforce allocation. Maximum use of health care assistants.
- Encouragement and financial incentives to become nursepractitioners.
- Regular team meetings.
- Horizontal teams.
- Valuing the patients and recognising achievements in local newspaper.

- •It sits well within the Health-Care Assistant role.
- It encourages questions
- Patients feel valued and listened to.
- •Low levels of health literacy require frequent repetition with the same messages.
- •It can be delivered in individual or group settings.

DOES IT WORK?..... NEARLY, SOMETIMES, ONE DAY, EVERY DAY, Mondays, never on a

- Sunday!
 The works because it is flexible to the day to day loads of the whole health team.
 - It fits any chronic condition management.
 - It can be as long or short as you can manage.
 - It can be adapted by both patient and Health provider.

Case Study 1: 65year old woman with Type 2 diabetes

HbA1c- 91mmol/ml reduced to 53mmol/ml; Wt.; 102kg reduced to 89kgs.

Treatment: = A,B,C,D,E,F,G,H,I.
