

Primary Health Care nurses and staff are taking a stand!

Did you know:

- an experienced Primary Health Care nurse is paid **10.6 percent less** (\$7,600 per annum) than their District Health Board colleague with the same qualifications, skills and experience?
- some medical receptionists/administrators earn **below** the living wage?

3200 of us across more than 500 workplaces nationwide are left with **no option** but to take strike action just to get what is fair.

We need the Government, the DHBs and the Ministry of Health to urgently provide **extra funding** so our employers can show they **value us**. We have been negotiating with **no luck** for a year.

Our employers now face a potential **crisis** because **low pay** makes it hard to attract and keep good staff.

This will make them less able to provide quality care, which will **increase hospital admissions** and put **extra strain** on the health system. Everyone pays when that happens.

There is **incredible value** in the work we do, especially in the fight against COVID-19. We know people are grateful. We appreciate the thanks, but that doesn't help us **pay our bills**.

Please stand with us!
